Product Description

Woodbay DS 9200 Spring Rake

LIGHTWEIGHT, FLEXIBLE AND RESPONSIVE. The fds series Turf Dethatchers are engineered to handle a variety of surfaces, from the contours and undulations of a golf course to the flat surfaces associated with sports fields, race tracks and equestrian arenas. No longer limited to using tractors for handling, the latest series of dethatchers offers a Quad (ATV) transportation option. As a result of new and inovative engineering and easier transportation options the latest fds series can be seen and used at all types of Equestrian sports facilities (Horse Racing tracks, Polo fields and Show Jumping facilities included) and Cricket, Rugby, Baseball, Aussie Rules, Gaelic Football, Hurling, Field Hockey grounds and more.

VERSATILE. The fds series high speed Turf Dethatchers help to prepare turf for overseeding and are seen as a less intrusive alternative to verti-cutting. The easy height/downward pressure adjustment feature of the tines allows the operator to quickly go from evenly spreading top dressing to "tickling" the turf.

INCREASED THATCH REMOVAL FOR HEALTHIER TURF. The fds series Turf Dethatchers have spring-loaded tines to help create tour quality fairway turf conditions and relieve sports' field or track surfaces compaction. They quickly allow water and fertilizer to penetrate the root zone as well as quicken germination of all types of grass seed.
